STACKYON

SAY NO TO
CODING.

SAY YES TO
STACKYON.

Unleashing the Enterprise Application Hub.
Powered By Low Code Technologies.

ABOUT
STACKYON PLATFORM

As expectations to automate operations, improve customer experience and accelerate speed to market increase, Stackyon provides a powerful and adaptable platform for rapid application development, without compromising quality or scalability. Empower and unleash the potential of every employee by enabling even business users to quickly make changes-on-the-fly with little to no help from overburdened software engineers.

Stackyon is a robust and highly flexible Enterprise Application Hub, architected around Low Code technologies that propels you on the path to Hyperautomation and Digital Transformation through:

- **Rapid Task, Workflow and Process Automation**
- **New Application Development – up to 10X faster**
- **Customizing Existing Applications – up to 20X faster**
- **Modernizing Legacy Applications - in weeks rather than years**
- **Integrating Disparate Applications**
- **Rationalizing your Application Landscape**

END THE TYRANNY OF CODING!

Stackyon's logical step-by-step process, granular configuration capabilities and an intuitive visual user interface means your applications are built and deployed at a fraction of the time and cost compared to traditional computer programming.

If you can visualize it, you can build it. Change at the speed of thought. Guaranteed!

CORE FEATURES

Low Code Application Platform

Create objects and components, define steps, set up data sources, define complex business rules, and the platform will automatically take care of all the back-end business logic with, in most cases, almost zero lines of code being written. Harness-and-shift power to where it matters the most - your front-line employees.

Reusable Components

Design once. Use any number of times. Build and deploy each successive application faster and with very little effort using reusable components that were built for other applications. Progressively speed up the design-build-deploy cycle time for every successive application without compromising quality or incurring additional costs.

Process Orchestration

Want a process fully automated? Need verification and approval before initiating the next step? Draw business processes on our work canvas instead of coding them. String together modules, pull-in workflow participants, communicate with third parties, define role controls and handoffs and set up simple or highly complex business rules based on your needs.

Seamless Data Integration

Quickly define data models and data structures and move data from internal and external third-party applications. Configurable SOAP and Restful API's permit bi-directional data uploads in a batch or in a real-time environment. Easily pull in data from legacy applications, transform and map it to your application, all without having to write a single line of code. Simply choose from our extensive library of pre-built or industry-standard connectors.

Adaptive Interface

Easily generate new user forms and screens and embed them in workflows seamlessly without a single line of code. Want to change the colors, font styles, font sizes and layout of the screen? No problem! Simple point-and click enables an entirely new and pleasing user experience level.

Cloud or On-Premise

Use our cloud implementation with on demand computer resources or integrate directly into your datacenter with local implementation. Flexibility, Security, Ramp-up-Time? Your decisions! Your Way!
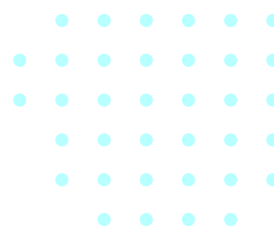

WHY CHOOSE
STACKYON?

Re-imagine and re-think your approach towards software systems by embracing a configurable, scalable, secure and intelligent automation platform. Put an end to the Tyranny of Code. Drive Innovation at hyper-speed by creating applications with drag-and-drop and point-and click functionality. Visual and highly configurable tools help you build and deploy mission-critical and complex applications at a fraction of the time and cost of traditional software programming.

AT A GLANCE:

• **Unmatched TCO:** Total cost of ownership is a fraction of building and maintaining multiple disparate applications on different stacks and platforms

• **Unmatched ROI:** Extend the capabilities of every asset you possess (people, process, infrastructure)

• **Unmatched Speed:** Design, build, test and deploy at the speed of thought

• **Unmatched Quality:** Leverage pre-built connectors and components to improve quality

• **Unmatched Stability:** Enterprise-grade architecture supported by a world-class technical team

• **Unmatched Flexibility:** Simple or complex. Cloud or On-Premise. Your decisions. Your choice.

DEMO THE
ENTERPRISE APPLICATION HUB

RATIONALIZE APPLICATION LANDSCAPE

Visual analytics tools and reporting provides near real time information to businesses on the financial and operational health

INTEGRATE APPLICATIONS ENTERPRISE WIDE

Eliminate data silos and ensure transparency and visibility across the enterprise

POWERFUL WORKFLOW & PROCESS AUTOMATION

Visual and collaborative model for stringing together logical steps and connecting internal and external users

NEW APPLICATION DEVELOPMENT

Drag & Drop, Point & Click Build new applications 5X - 10X faster

MODERNIZE LEGACY APPLICATIONS

Rebuild legacy applications, function by function, without disrupting business, protect sunk investments in weeks rather than months

CUSTOMIZE EXISTING APPLICATIONS

Configure new processes or change existing processes without touching the core application - 20X faster
